

ALUMINIUM

5754 - H111

5754 - H111

Aluminium alloy 5754 is a non-heat treatable alloy known for its excellent corrosion resistance, good weldability and strength compared to other 5000-series alloys. While it's not the strongest alloy, it provides adequate strength for many applications while retaining flexibility. The 'H111' refers to its temper designation, indicating that the metal has been strain-hardened only to the point of providing it with the desired level of strength after forming.

KEY FEATURES

- Excellent weldability with all methods
- Excellent resistance to seawater
- Excellent corrosion resistance
- Good formability
- Suitable for complex shapes

CHEMICAL PROPERTIES

Magnesium (Mg)	Manganese (Mn)	Silicone (Si)	Iron (Fe)	Chromium (Cr)	Zinc (Zn)	Copper (Cu)	Aluminium (Al)
2.6-3.6%	0.5%	0.4%	0.4%	0.3%	0.2%	0.1%	rest

MECHANICAL PROPERTIES

Tensile strength (N/mm ²)	220-250
Yield strength (N/mm ²)	80-130
Elongation (% at break)	12-20
Proof stress (MPa)	185-245
Hardness - Brinell (HB) max	60

PHYSICAL PROPERTIES

Density (kg/m ³)	267	
Modulus of elasticity (Gpa)	70	
Mean coefficient of thermal expansion	0-100°C (µm/m/°C)	23.5
	0-350°C (µm/m/°C)	24.7
	0-538°C (µm/m/°C)	25.6
Thermal conductivity	at 100°C (W/m.K)	135
	at 500°C (W/m.K)	155
Specific Heat 0-100°C (J/kg.K)	88	
Electrical conductivity (IACS %)	31-33	
Melting point (°C)	625	

MARKET SECTORS

Marine Equipment

Hulls, decks, superstructures

Automotive Industry

Body panels, chassis parts, suspension components

Parts & Components

Machinery, equipment, vessels, containers, tanks

Food & Beverage Industry

Processing equipment, containers, storage tanks

Construction & Architecture

Roofing, cladding, facades, curtain wall systems

Oil & Gas Industry

Platforms, gangways, components
